

Shields you from Harmful Pathogens by Boosting Body's Natural Immunity

## Instructions for Xtrimune Immune booster

"Xtrimune" immune booster contains **NO** artificial preservatives, additives, colorants, homogenizers, Ph regulators, alcohol or cane sugar. The sweetness is due to first grade palm sugar and wild bees honey from the evergreen virgin highly-divers jungles of Sri Lanka.

"Xtrimune" immune booster has been subjected to a long duration Ultra Heat-Treated sterilization, which kills all types of microbes and their spores. It is a highly sterile suspension.

### Very effective in acute and chronic

Sinusitis, Laryngitis, Adenoiditis, Tonsillitis, Tracheitis, Bronchitis, Alveolitis, Bronchiectasis, COPD, Bronco pneumonia and Pulmonary pneumonia, Wheeze and Asthma due to bacterial and viral infections.

### Pregnancy and Lactation

It is safe to be used in normal dosage in pregnancy. Preferred to be taken orally after meals during pregnancy.

During lactation may increase production of breast milk. If too much produced advised to manually remove breast milk to avoid congestion. If milk is pouring or spaying remove some milk prior to feeding to avoid choking.

## Dosage for Xtrimune Immune booster

**Measure the recommended dosage to a cup and place the cup in a hot bowl of water until it become warm to drink for best rapid results.**

### For prevention and immune boosting

**Adults: Start with 30ml and continue 15 ml every twelve hourly for 6 days total 200ml**

**Children between 5+yrs 10yrs: Start with 20ml and continue 15 ml every eight hourly for minimum 3 days**

**Children between 1year – below 5yrs: Start with 10ml and continue 5 ml every eight hourly for minimum 3 days**

**Children between 6month – below 1year: Start with 7.5ml and continue 5 ml every eight hourly for minimum 3 days**

### FOR PATIENTS EXPOSED OR POSITIVE FOR VIRAL DISEASES

(eg: SARS Covid19, Viral Hepatitis, Herpes, Common cold, Influenza), fever, asthma or wheeze and phlegm related conditions.

**Adults: Start with 40ml and continue 30 ml six hourly for 4 days total 400ml**

**Children between 5+yrs 10yrs: Start with 20ml and continue 15 ml every eight hourly for minimum 3 days**

**Children between 1year – below 5yrs: Start with 10ml and continue 5 ml every eight hourly for minimum 3 days**

**Children between 6month – below 1year: Start with 7.5ml and continue 5 ml every eight hourly for minimum 3 days**

## Instructions for Xtrimune Immune booster “A LIFE SAVER” which really works rapidly!

**IT IS NATURAL TO PASS LOOSE STOOLS AFTER ADMINISTERING ‘XTRIMUNE’** Immune booster which encourages the gut immune mechanism. Urine color might become slightly darker since the elimination of blood toxins increase the color of urine.

### **Probable pharmacodynamics:**

**Promotes free oxygen(O<sub>2</sub>)** via nitric oxide (NO) synthase pathway (This oxygen is not from the lungs, but from the NO molecules of the tissues which releases O<sub>2</sub> to O<sub>2</sub> depleting tissues compensating the pulmonary O<sub>2</sub> saturation via lung gas exchange, in turn rapidly increasing the bio availability of O<sub>2</sub>)

**Broncho dilatory action** widens the air tubes until the alveoli assisting good air exchange

**Rapidly Clears up the blocked mucus** within the bronchial tree. This increases the bio-availability of atmospheric air consisting about 20% vital oxygen gas to be utilized at the alveoli gas exchange membrane.

**Rapidly clears up** all suppurated and excess mucus clogs, allowing room for the air to pass through maintains the surfactant potency not allowing fibrosis of alveoli via maintaining lung expansion and collapsibility facilitating clear breathing.

**Broad spectrum antimicrobial activity** reduces the load of all types of microbes affecting the normal mucosal action and brush-border action. bacteria (both gram negative and positive bacteria along with spirochetes) and viruses

**Increases the surfactant thickness** of the mucosa thereby strengthening the defense shield against microbes. This prevents entry or exit of any microbe including bacteria (both gram negative and positive bacteria along with spirochetes) and viruses

**Anticoagulant and antiplatelet activity** completely checks off any possibility of getting a stroke keeping blood in thin, free flowing state not allowing sticking of the platelets to each other known as platelet aggregation which prevents possibility of strokes in patients

**Anti-inflammatory action** reduces the inflammation rapidly reducing the (Based on visual observation, the ancients characterized inflammation by) five cardinal signs, namely redness (rubor), swelling (tumour), heat (calor; only applicable to the body' extremities), pain (dolor) and loss of function (function-laesa) affecting the normal tissue reliving the body arthralgia and myalgia

**Anti-pyretic action brings down the body temperature rapidly** comparatively faster than the NSAIDS both bacterial or viral caused pyrexia (fever) or even pyrexia of unknown origin (PUO).

**Diuretic** action assists to pass excessive accumulated fluid felids via urine

**Mild Laxative action** regulates the bowel movements and restores the normal appetite

**Increases membrane permeability** assists in efficient gas exchange and tissue nourishment in alveoli and tissues

**Reduces peripheral resistance** this lowers the blood pressure and maintains which reduces any risk of CVA

**Hepatoprotective** reduces fatty liver, restores elevated liver enzymes, restores liver fibrosis and assists in reversing cirrhosis of the liver

**Renal safe** in CKD(chronic kidney disease) did not elevate or increase impairment but maintained or slightly improved renal functions in terminal renal diseases.

## Instructions for Xtrimune Immune booster “A LIFE SAVER” which really works rapidly!

Xtrimune was orally taken by confirmed cases for Covid19, which clinically showed rapid recovery of all the signs and symptoms within a short duration.

When given to ventilated patients, showed rapid recovery by increasing oxygen saturation from low levels to 100% in a very short time and were able to be disconnected from the ventilators and discharged from hospitals.

PCR for covid19 from positive to negative, with no hangover or post COVID-19 syndrome.

It was also used as prophylaxis for exposed and high-risk patients which showed zero contraction even after 60 days of exposure.

**It is formulated to boost up the body’s defense mechanism towards destroying the entry pathway of pathogens disrupting and decoding proliferation signaling pathways avoiding entry or exit from the host cell. Thereby preventing the entry to the risk group, disseminating the infected group and eliminating further post viral syndrome in cured cases. This helps rapid clinical recovery within a very short duration which was observed clinically with patients who were found positive for Covid-19. It is fortified to eliminate any post viral syndrome and complications and to enhance body’s natural defense immune mechanism enhance.**
